

How will your business change and how will Summit Business Systems help?

Change and improve your data flow processes without changing the way you do business – **I can help.**

From **custom packages/programs** that help execute specific processes to full systems that can begin at step 1 of your business process and continue into your accounting systems, financial statements and reporting – **I develop and build systems/and system add-ons that meet your real world needs.** I have an array of experience with both stand-alone systems and interfacing with existing software packages (Quickbooks, SysPro, Peachtree, and various Sage products, PFW, X3, 300 and more). My focus is on building you a rock solid system that is flexible enough to grow and change with your growing business.

Summit Business Systems

Jeff Wilcox

Jeff has helped our distribution and tracking become a strong point in our process. Streamlining and bringing ease to what once was an unmanageable bottleneck.

Matt L - CCC

With a client base that includes small entrepreneurs, manufacturers, financial service providers, warehouse and distribution, and at least one publicly traded company - my expertise is vast, varied, focused and hands-on.

A custom programmer and CPA with 20 years of industry experience designing, programming, and working with independent computer systems/applications both on existing systems and developing new systems/applications.

Not sure where to turn? I will help you find a path and get you to the finish line.

Jeff designed our new system (from order entry to Financial Statements) which has helped us become an even more efficient supplier and service provider.

Jack H. - Higgins Bros.

Jeff is amazing. Over 20 years ago, he built us a custom system that has helped us grow and innovate our processes. Adding plants, company acquisitions, new lines of business, we never needed a new system. We just needed Jeff.

Sherry K. - GREIF
